PRESS RELEASE

PVC GAME CHANGER NOW AVAILABLE

Evolutionary product fuses pipes without daubers, primers, cement or glue, works on both wet and dry pipes and will not spill, freeze or harden in can!

ST. LOUIS, MO - Jan. 1, 2018 - Vapco Products, a leading manufacturer in the HVACR industry, announced today the launch of PVC SPRAY 'N LOCK™, an exciting new aerosol product that's poised to turn the world of PVC, CPVC, ABS and SWV on its head.

PVC SPRAY 'N LOCK™ does the impossible. It replaces the traditional multiple-product, multiple-step process of cleaning, priming and cementing pipes with an easy-to-use, chemical bonding spray. Simply spray the product on the pipe and coupling and they lock in place. No hassle, no worries, just a permanent bond.

"We wanted to give the contractor a product that would make their life easier, save them time and money and clear up the clutter at their feet," said Scott Garner, Vapco Products President. "With PVC SPRAY 'N LOCK™ we've done just that."

BONDS BOTH DRY AND WET PVC PIPES

PVC Spray 'N Lock is an all-weather, all-situation solution. It works on wet or dry pipes, can be used in tight spaces, requires no primer, no daubers and will not freeze, spill or harden in the can.

Specially designed for contractors that need a better, faster and more practical way to build and repair PVC systems, PVC SPRAY 'N LOCK™ answers the call. Pressure tested to 215PSI, heat tested to 135°F, it offers an extremely secure bond when applied properly. It's perfect for regular PVC and CPVC repair and installation, electrical conduits, irrigation, ventilation (ABS) and drainage systems (SWV), as well as swimming pools, lawn and garden, large and small hobby projects and more.

“It’s truly an all-weather, all-conditions solution,” said Garner. “It works in the rain, sleet and snow and is perfect for tight or awkward spaces. It literally allows contractors to reclaim their workspace, to choose how and where they do their bonding. No more looking for space to apply a primer, no more fiddling with daubers, glues, brushes or cements. No more worrying about whether it’s too cold or too wet for application. PVC SPRAY ’N LOCK™ works when, where and how the contractor needs it most.”

“Rain, sleet, snow ... bring it on! PVC SPRAY ’N LOCK™ is ready whenever and wherever the contractor is.”

Scott Garner, Vapco Products president

Unlike traditional cement products, PVC SPRAY ’N LOCK™ can’t be spilled and won’t dry out. Each can be used until the product is exhausted. This translates into major savings.

“Imagine,” Garner continues. “No more hardened left overs or worries that an older product might not be good enough for the job. One can of PVC SPRAY ’N LOCK™ lasts until it’s finished. This not only saves the contractor money (eliminating the need to throw away half-used jars of cement) but also gives him the confidence to know that the product in his hands is going to work as advertised ... no matter when (or where) he needs it. The industry has never seen anything like it. **It’s truly an evolution in PVC bonding.**”

PVC SPRAY ’N LOCK™ comes in industry purple and professional clear. Both offer the same bonding power and application advantages, plus (to help with inspections) both will fade/dissolve any printed ink on sprayed areas.

PVC SPRAY ’N LOCK™ Purple dries inspection purple, ensuring quick and easy visual confirmation of application. It’s perfect for contractors that need an easy way for inspectors to see that their PVC pipes are professionally bonded. PVC Spray-N-Lock purple leaves an unmistakable purple color on all sprayed joints and surfaces

PVC SPRAY ’N LOCK™ Clear dries completely clear, leaving little to no indication a bonding solution was used. Use it to build and secure PVC frames, golf cages, work tables, clothes and bike racks, outdoor sinks, storage bins, playhouses, paint booths, outdoor sprinkler/mister stations and more.

“Spray ’N Lock offers a glimpse into the evolution of PVC bonding. It’s the ultimate, one-can-does-it-all, simply-spray-n-lock-your-way-to-success solution ... giving the contractor unparalleled opportunities and unprecedented, never-before-seen options,” said Garner.

Certified not to negatively impact the potability of water, ASTM D3452-06(2017)
