

# Seal

## Application (What is it for?)

Finding and repairing refrigerant leaks can be one of the most time consuming and costly jobs for HVACR technicians. New requirements for repair and leak management have put an emphasis on the need for quick and dependable methods to find and repair leaks permanently. Vapco's Xpress Seal offers the best solution for quick and easy leak repair and can even be used to prevent system leaks from forming!

## Why it stands out!

Xpress Seal is designed to fix and repair leaks throughout an entire system, including evaporators, condensers, and soldered joints. This is due to the fact that Xpress Seal travels with the refrigerant inside the system, not with the oil like most other leak seals on the market. Traveling with the refrigerant allows Xpress Seal to reach every nook and cranny, finding leaks that other sealants will never come in contact with. Xpress Seal only reacts when it comes in contact with the atmosphere at the site of a leak and will only react when air and moisture are present. It begins working immediately, another advantage gained from the speed in which Xpress Seal circles the system. It finds leaks in minutes and most leaks are permanently repaired within hours after installation. Xpress Seal is also compatible with all refrigerants in use on the market today, excluding ammonia.

The benefits of Xpress Seal don't stop there! Install with confidence, this product has been proven not to plug or clog TXV's, pistons, capillary tubes or harm manifold gauges. With almost 20 years of use and installations, Xpress Seal has repaired millions of leaks around the world. The direct inject design allows you to install with multiple methods, by injecting with refrigerant tank, gauges or with one of our Xpress tools all without needing to pump down the system. The clear tube also allows you to watch the product enter the system. Xpress Inject Seal is perfect for split systems, heat pumps, microchannel coils, packaged units, and even VRV systems!

## Key Features

- Concentrated formula seals leaks with less material in the system
- Strongest and fastest sealant on the market
- Will not clog TXV's, pistons, or cap tubes
- Will not harm gauges
- Seal Leaks faster and safer
- Don't waste time pumping down the system
- Installs in seconds, starts working immediately
- Prevents leaks
- Save time and money repairing leaks
- Stop harmful refrigerant emissions
- Almost 20 years on the market
- Over 2 million leaks repaired
- Made in the USA

The graphic shows the Vapco logo at the top, followed by the text 'EXPRESS INJECT' and 'SEAL' in large, bold letters. Below this, it states 'PROVEN RESULTS!' and '18 YEARS OF SUCCESSFULLY SEALING LEAKS'. A list of features is provided, including 'Fastest acting leak seal on the market!', 'Formulated for a permanent seal', 'Compatible with all refrigerants (excluding ammonia)', and 'Safest choice on the market (no permanently blinding chemicals)'. At the bottom, there is an American flag and the text 'MADE IN USA'.
