

## Kitchen Sink & Kitchen Sink with UV Dye

Kitchen Sink is a performance packed refrigerant Xpress Inject designed to enhance system efficiency, prevent and protect against moisture and acid, and permanently seal leaks without hardening system lines or valves.

Kitchen Sink is designed to reverse polarity that causes friction and strain on moving parts, by returning oil to the system's compressor. This Xpress Inject product scours the lines for any moisture or acid formation, attacks and neutralizes acids, and removes moisture by converting acids into a synthetic lubricant compatible with the

system's oils. Kitchen Sink is formulated with Xpress Seal, the fastest acting refrigerant sealer on the market proven to permanently seal leaks by traveling with refrigerant gas instead of oil. This specially formulated epoxy reacts to water and air when in contact with the atmosphere at a leak.

Ideal solution for enhancing system performance; preventing and attacking moisture that can cause acid formation in refrigerant lines; and sealing small holes in A/C condensers, evaporators, fittings, and metal inline sets.

Fastest acting refrigerant sealer on the market. Safe to use, and designed to prevent accidental release under pressure or if hooked up incorrectly. Tests have shown that using this product can reduce mechanical friction by 1500%. Reduces amp draw by 11 to 15%, with a 2 degree temperature drop across the evaporator coil. Reduces compressor noise and cost of energy Increases the longevity of the system. The product's formula is the safest choice on the market, and does not contain harmful chemicals that can lead to blindness.

This product is compatible with all refrigerants except ammonia.
