

Seal with UV Dye

Easy to use Xpress Seal and UV Dye was the first combo in the Xpress Inject line from Vapco. The same fastest acting seal formerly, and super concentrated dye separate; now in a single use and easy to use direct inject tube. UV Dye works quickly to locate leaks at the same time as Seal, which permanently fixes them.

Vapco's Seal is an 18+ year, tried and trusted formula, that has no rival on the market. After having sealed millions of leaks, we added one of the brightest UV dyes in the industry to make finding leaks even easier. Designed to be compatible with and travel with the refrigerant, Xpress Seal with UV Dye will seek out, fix and find leaks everywhere in the system. Xpress Seal will start to repair small and micro-leaks within minutes of installation and permanently mend most leaks in just a few hours. Scan the system after installation to check where UV Dye has brightly highlighted the areas that may need external repair. UV Dye alerts you to the exact spots that should be tested with conventional leak detection methods to ensure every leak gets repaired properly.

This power packed combo can be installed multiple ways and single use injects can be found in an industry leading 8 sizes (1.5 ton and smaller, 5 ton, 5 ton XL leak, 15, 30, 60, 125 and 250 tons)! Proven not to harm TXV's and cap tubes, Vapco's Xpress Seal and UV Dye is a 2-in-1 solution to harmful refrigerant leaks and time-consuming searches.

Key Features

- Concentrated formula finds and seals leaks with less material in the system
- Prevents leaks and saves time wasted searching for them
- Stops and reduces harmful refrigerant emissions
- Safe and easy to use
- Perfect for preventative maintenance programs
- Compatible with all refrigerants (excluding ammonia)
